Dear Pascale,

After consultation of the Spanish members of CC RUP, regarding the Commission Staff Working Document of the Examination of the Council Regulation (EU) 1412/2013 on autonomous Union tariff quotas for imports of certain fisheries products into the Canary islands from 2014 to 2020, which provides opinions for the period after the 31st of December 2020, for two autonomous annual tariff quotas of 15,000 tonnes, we propose that it would be more prudent to carry out a new impact assessment, regarding the situation caused by the pandemic of Covi19 and its impact in the next five years.

This document was based on information provided by the spanish government on the impact of the measures determined by the regulation 1412/2013, about the products in analysis that were imported into the Canary Islands in April 2019. However, these data were provided in a very different context from the current one, and predictably, from the one we will live in the next years, due to the unstable situation created by COVID 19. So this analysis may be distorted and not be reasonable to apply in the near future.

In fact, one of the main sources of data for this information was based on the Canary Islands' strong dependence on tourism. However, this year the tourism sector in Canary islands is being strongly affected by the Covid19 pandemic and it's expected to be continued, or at least severely affected, which demands the need for a revision of this document.

Best regards,

Daniela Costa
